

# GENERAL PHYSICS B (1)

## (11110PHYS113303)

3 Credits

Lecturer: Yen-Hsiang Lin 林晏詳

Office: Physics Building R520

Email: [yhlin@phys.nthu.edu.tw](mailto:yhlin@phys.nthu.edu.tw)

# Course Information

- Join the class by:
  - a. Face-to-face class(Main): 8:30~10:00AM Tuesday and Friday @GEN IV 224 (with facial mask and social distance)
  - b. Realtime online via Microsoft Team  
<https://teams.live.com/join/9570955571789>
  - c. Recorded google meeting video on eLearn  
<https://elearn.nthu.edu.tw/>

# Additional enrollment (加簽)

Due to the classroom space limitation of 190 people, we can only offer for 30 more students for enrolling in this course. The priority for the enrollment is following:

1. Senior international students
2. Senior students
3. Freshman international students
4. Freshman

If you are interested in this course, please apply for additional enrollment request via university's system by 5PM, 2022/09/16(Fri.). Your enrollment or not will be decided at 5PM on 9/16. Any late additional enrollment request will be rejected.

# Course Format

- Join This course will be mainly taught by lecturing with power point slides. Power point slides is easier for remote class and recording.
- All the slides will be posted on eLearn Platform. Please do not spread out without permission.
- 8:30~10:00AM without breaking
- Note that this course will be given in English.

Yen-Hsiang Lin 林晏詳  
Assistant Professor  
Department of Physics,  
National Tsinghua University  
Email: [yhlin@phys.nthu.edu.tw](mailto:yhlin@phys.nthu.edu.tw)

2011 Ph.D Physics, University of Minnesota  
2011~2014 Postdoc Researcher, University of Michigan  
2011~2020 Postdoc Researcher, University of Maryland  
2020~current Assistant Professor, National Tsinghua University

## Research Interests

- Condensed matter physics experimentalist
- Superconducting qubits and quantum information
- Transport and RF properties of low dimensional superconductor
- Nano-scale electronic and thermoelectric semiconductor materials

# Course Content

- Fundamental Tools
- Dynamics systems (動力學系統)
  - Kinetics
  - Newton's Laws
  - Energy
  - Many Particles Motion and Rotation
  - Oscillation and Waves
  - Fluid motion
- Thermodynamics (熱力學)
  - Heat, Work, and the first law of thermal dynamics
  - Entropy and the second law of thermal dynamics

# Course Calendar I

Week	Date	Content
1	9/13(Tue.)	<b>Course Information</b> <b>Fundamental Tools:</b> measurement & unit
1	9/16(Fri.)	<b>Fundamental Tool:</b> vector & basic calculus
2	9/20(Tue.)	<b>Kinetics:</b> motion in 1D
2	9/23(Fri.)	<b>Kinetics:</b> motion in 2D and 3D
3	9/27(Tue.)	<b>Newton's law:</b> Newton's first and second law I
3	9/30(Fri.)	<b>Newton's law:</b> Newton's first and second law II ( <b>Homework 1</b> )
4	10/4(Tue.)	<b>Newton's law:</b> Newton's third law
4	10/7(Fri.)	<b>Energy:</b> kinetic energy and work
5	10/11(Tue.)	<b>Energy:</b> potential energy and conservation of energy
5	10/14(Fri.)	<b>Gravity:</b> Law of gravity ( <b>Homework2</b> )
6	10/18(Tue.)	<b>Gravity:</b> Gravitational energy and gravitational field
6	10/21(Fri.)	<b>Review I</b>
7	10/25(Tue.)	<b>Mid Term 1</b>
7	10/28(Fri.)	<b>Many Particles Motion and Rotation:</b> center of mass & linear momentum
8	11/1(Tue.)	<b>Many Particles Motion and Rotation:</b> rotation
8	11/4(Fri.)	<b>Many Particles Motion and Rotation:</b> torque & angular momentum

# Course Calendar II

9	11/8(Tue.)	<b>Oscillation and Waves:</b> simple harmonic oscillation
9	11/11(Fri.)	<b>Oscillation and Waves:</b> damped and forced oscillation ( <b>Homework3</b> )
10	11/15(Tue.)	<b>Oscillation and Waves:</b> description of waves
10	11/18(Fri.)	<b>Oscillation and Waves:</b> interference of waves
11	11/22(Tue.)	<b>Oscillation and Waves:</b> propagation of waves
11	11/25(Fri.)	<b>Fluid Motion:</b> Density, Pressure, and Hydrostatic Equilibrium ( <b>Homework4</b> )
12	11/29(Tue.)	<b>Fluid Motion:</b> Fluid Dynamics and Application
12	12/2(Fri.)	<b>Review II</b>
13	12/6(Tue.)	<b>Mid Term 2</b>
13	12/9(Fri.)	<b>Temperature and Heat:</b> temperature, heat and thermal equilibrium
14	12/13(Tue.)	<b>Temperature and Heat:</b> Heat capacity, specific heat, and heat transfer
14	12/16(Fri.)	<b>Thermal Behavior of Matter:</b> ideal gases, and kinetic theory of ideal gas
15	12/20(Tue.)	<b>Thermal Behavior of Matter:</b> phase changes and thermal expansion
15	12/23(Fri.)	<b>The First Law of Thermal Dynamics:</b> 1 <sup>st</sup> law of thermal dynamics
16	12/27(Tue.)	<b>The First Law of Thermal Dynamics:</b> Thermodynamic processes ( <b>Homework5</b> )
16	12/30(Fri.)	<b>Entropy and the Second Law of Thermal Dynamics:</b> entropy
17	1/3(Tue.)	<b>Entropy and the Second Law of Thermal Dynamics:</b> engines and refrigerator
17	1/6(Fri.)	<b>Review III</b>
18	1/10(Tue.)	<b>Final Exam</b>

# Text Book

- Essential University Physics Volume 1, 4<sup>th</sup> Edition  
Richard Wolfson

# Reference Book

- Fundamentals of Physics, Extended, 11th Edition  
David Halliday, Robert Resnick, Jearl Walker

# Learning Resources

- All the course material will be on eLearn platform. Slides will be provided before class started.

- Office Hours: 12:00~1:00 Monday @ Physics building R520 or by Microsoft Team(same link as online course)

<https://teams.live.com/meet/9570955571789>

- TA

Chien-Chun Ding 丁建鈞(cyrusding0427@gmail.com)

Ching-Yeh Chen 陳慶燁(edward035358370@gapp.nthu.edu.tw)

Chiang-Yuan Hu 胡將遠(a0935986668@gmail.com )

# Evaluation

- Homework (25%)
- First midterm (25%)
- Second midterm (25%)
- Final (25%)

# Homework

- 5 homework sets for the whole semesters. Each homework set due in a week.
- Homework sets will be posted on eLearn.
- Please hand in your homework via eLearn. No late homework will be accepted
- Discussion is encouraged. However, copying homework will results in 0 point for the whole homework set.

# Exams

- There will be two midterms and one final. The dates are all set as shown in course calendar(10/25, 12/6, and 1/10).
- All three exams will be started at 8:00AM and ends at 9:50AM.
- You can bring one A4 information sheet for the exam.
- Cheating will result in 0 points for the whole exam and will be reported to university.

# Exams Corrections for Midterm 1

- After you hand in your answer of the exam, you can work out a correction (open book) and hand in on eLearn within 48 hours.
- The correction must be work out by yourself. Copying others' answers will result in 0 points for the exam.
- A fully correct correction of an exam problem will earn 60% of the original scores.
- Taking the higher score of original or correction as the score of each single exam problem. Sum all the scores of the exam problem will be the final score of the exam.

# Policy for COVID-19

- We follow university guideline about course under COVID-19.
- If on-site course is not allowed, we will have online course.
- For students who cannot attend exam due to COVID-19, they can have test remotely with monitor of web camera.
- If on-site exam is not allowed, we will have take-home exam instead.

# Notes about the course

- Don't hesitate to raise your hand if you have questions during the class.
- Any suggestions or comments on improving the pedagogy is more than welcome and is highly appreciated.
- If you have difficulty to catch up this course, please contact me. A midterm warning may be sent out for students who don't perform well.

Questions?

# GENERAL PHYSICS B (1)

# FUNDAMENTAL TOOLS

Measurement and Units

# Foundation of Physics – Measurement & Units

- Physics is based on **measurement** and **comparison** of physical quantities. The main goals of physicists is finding out the **relationships** between physical quantities.
- We measure each physical quantity in its own **units**, by comparison with a **standard**. The unit is a unique name we assign to measures of that quantity

# The International System of Units (SI)

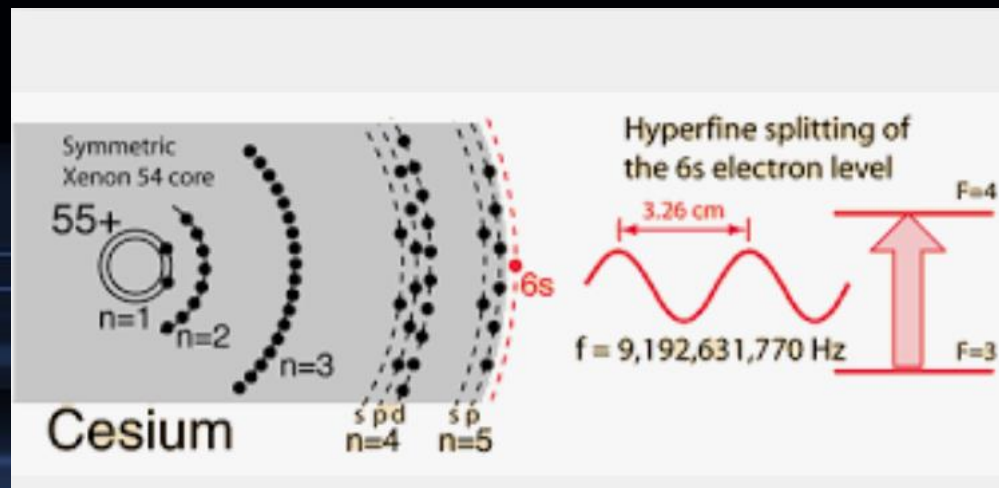

- Provides precise definitions of seven fundamental physical quantities:
  - Time: the second (s)
  - Length: the meter (m)
  - Mass: the kilogram (k g)
  - Electric current: the ampere (A)
  - Temperature: the kelvin (K)
  - Amount of a substance: the mole (mol)
  - Luminosity: the candela (c d)
- Supplementary units describe angles:
  - Plane angle: the radian (rad)
  - Solid angle: the steradian (s r)

# International System of Units – SI Units

<b>Quantity</b>	<b>Unit Name</b>	<b>Unit Symbol</b>
Length	meter	m
Time	second	s
Mass	kilogram	kg

# The unit of time in SI units : second

- Definition of 1 second (2019): The second, symbol s, is the SI unit of time. It is defined by taking the fixed numerical value of the cesium frequency  $\Delta\nu_{\text{Cs}}$ , the unperturbed ground-state hyperfine transition frequency of the cesium-133 atom, to be 9192631770 when expressed in the unit Hz, which is equal to  $\text{s}^{-1}$ .

# Scientific Notation and Significant Figure

- To express the very large and very small quantities we often run into in physics, we use scientific notation, which employs powers of 10.

Example:

$$3\,560\,000\,000\text{ m} = 3.56 \times 10^9\text{ m}$$

$$0.000\,000\,492\text{ s} = 4.92 \times 10^{-7}\text{ s}$$

# Scientific Notation and Significant Figure

- If we think the energy consumption is between 342.5 and 343.5 kWh , we report it as 343 kWh and say that it has three **significant figures**.
- Significant figures tell how precisely we know the values of physical quantities.
- The act of calculation does not increase precision.

# Rules for Significant Figures (1 of 2)

- In multiplication and division, the answer should have the same number of significant figures as the least precise of the quantities entering the calculation.
- Example:  $(3.1416 \text{ N})(2.1 \text{ m}) = 6.6 \text{ N}\cdot\text{m}$

# Rules for Significant Figures (2 of 2)

- In addition and subtraction, the answer should have the same number of digits to the right of the decimal point as the term in the sum or difference that has the smallest number of digits to the right of the decimal point.
  - Example:  $3.249 \text{ m} - 3.241 \text{ m} = 0.008 \text{ m}$ .
    - Note the loss of precision, with the answer having only one significant figure.

# Prefixes for SI Units

$10^{24}$	yotta-	Y
$10^{21}$	zetta-	Z
$10^{18}$	exa-	E
$10^{15}$	peta-	P
$10^{12}$	tera-	T
<b><math>10^9</math></b>	<b>giga-</b>	<b>G</b>
<b><math>10^6</math></b>	<b>mega-</b>	<b>M</b>
<b><math>10^3</math></b>	<b>kilo-</b>	<b>k</b>
$10^2$	hecto-	h
$10^1$	deka-	da

$10^{-1}$	deci-	d
<b><math>10^{-2}</math></b>	<b>centi-</b>	<b>c</b>
<b><math>10^{-3}</math></b>	<b>milli-</b>	<b>m</b>
<b><math>10^{-6}</math></b>	<b>micro-</b>	<b><math>\mu</math></b>
<b><math>10^{-9}</math></b>	<b>nano-</b>	<b>n</b>
<b><math>10^{-12}</math></b>	<b>pico-</b>	<b>p</b>
$10^{-15}$	femto-	f
$10^{-18}$	atto-	a
$10^{-21}$	zepto-	z
$10^{-24}$	yocto-	y

# The unit of length in SI units : meter

- Definition of 1 meter: the length of the path traveled by light in a vacuum during a time interval of  $1/299\,792\,458$  of a second.

Power of 10 in length

# Cosmic Eye

a state-of-the-art view of the universe

version 2.0

Danail Obreschkow

Simulations are done by Kip S. Thorne  
(Nobel Prize winner in 2017)

Barry C. Barish (Caltech)

Kip S. Thorne (Caltech)

Rainer Weiss (MIT)

**2017 Nobel Prize in Physics**

# Black hole in the movie “Interstellar (星際效應)” base on real simulation!

# Laser Interferometer Gravitational-Wave Observatory (LIGO)

Can measure change of length in  $10^{-18}$  meter!

# Change Unit

- To convert 2 min to seconds, we have :

$$2 \text{ min} = (2 \text{ min}) (1) = \left( 2 \cancel{\text{ min}} \right) \left( \frac{60 \text{ s}}{1 \cancel{\text{ min}}} \right) = 120 \text{ s}$$
