

**Midterm Exam II**

May 19, 2009

Instructor: Chin-Liang Wang

1. **Compute** and **sketch** the Fourier series coefficients of the following signal: (10%)

(Label your axes clearly and carefully!)

2. Determine the output signal of the system  $y(t)$  if the impulse response of the system  $h(t) = e^{at}u(-t)$  and the input signal  $x(t) = e^{bt}u(-t)$  for

- (1)  $a > 0, b > 0$ , and  $a \neq b$ . (5%)  
 (2)  $a > 0, b > 0$ , and  $a = b$ . (5%)

(Hint:  $x(t) = e^{-at}u(t), a > 0 \xleftrightarrow{\mathcal{F}} X(\omega) = \frac{1}{a + j\omega}$ .)

*Handwritten notes:*  
 $X(\Omega) = \int_{-\infty}^{\infty} x(t) e^{j\Omega t} dt$   
 $X(t) = \frac{1}{2\pi} \int_{-\infty}^{\infty} X(\Omega) e^{j\Omega t} d\Omega$

3. Consider an LTI system with frequency response  $H(\omega) = \begin{cases} e^{-j\omega} & |\omega| \leq 5 \\ 0 & \text{otherwise} \end{cases}$ .

Determine the output  $y(t)$  if the input is  $x(t) = \sum_{k=0}^{\infty} (0.5)^k \sin(2kt)$ . (10%)

4. Evaluate the quantities for following signal:

- (1)  $\int_{-\infty}^{\infty} x(t) dt$  (3%)    (2)  $\int_{-\infty}^{\infty} |x(t)|^2 dt$  (3%)    (3)  $\int_{-\infty}^{\infty} x(t) e^{j2t} dt$  (3%)  
 (4)  $x(0)$  (3%)    (5)  $\tan^{-1} \left\{ \frac{\text{Im}(x(t))}{\text{Re}(x(t))} \right\}$  (3%)
